MD Saidul Islam

Computer Science & Engineering Student | Web Development | Software Projects

Dhaka, Bangladesh | +880 1610-150279 | saidul.islam11104@gmail.com | github.com/thats-saidul | linkedin.com/in/mdsaidul-islam | kaggle.com/saidul

Summary

Computer Science and Engineering student with hands-on experience in web development and software projects. Skilled in PHP, Java, C++, JavaScript, Python, and SQL, with experience building database-driven web applications and layered desktop systems. Strong foundation in OOP, data structures, algorithms, and software development.

Education

American International University-Bangladesh (AIUB) **Dhaka, Bangladesh**
BSc in Computer Science and Engineering | CGPA: 3.17/4.00 *Expected Dec 2026*

Relevant Coursework: Web Technologies, Data Structures, Algorithms, Object-Oriented Programming, Software Development & Project Management, Software Quality & Testing

Technical Skills

Languages: PHP, Java, C++, C#, JavaScript, Python, SQL, HTML5, CSS3
Web & Databases: Server-side rendering, session management, MySQL/MariaDB, phpMyAdmin, Apache, MySQLi prepared statements
Tools & Concepts: Git, GitHub, Java Swing, OOP, layered architecture, file I/O, REST-style routing, responsive UI

Projects

Online Restaurant Management System **Jan 2026**
PHP 8, MariaDB, JavaScript, Apache | GitHub

- Built a full-stack, server-rendered application supporting customer, admin, rider, and sales-analyst roles with session-based access control across protected pages.
- Implemented bcrypt authentication, MySQLi prepared statements, output sanitization, and a session-backed cart/order workflow; added admin menu CRUD, image upload, user management, and a normalized 6-table schema with 29 seeded menu items.

RIDE — Ride Management System **Jun 2025**
Java, Swing, Java NIO File I/O | GitHub

- Engineered a 100% Java desktop application using a four-layer architecture (Entity, EntityList, GUI, File) to separate domain, persistence, and presentation concerns.
- Implemented CRUD for employees, passengers, and bike rides with duplicate-key validation and ID lookup; built zero-dependency file persistence plus Swing login, registration, and role-based dashboards.

Research Experience

BanglaIndoorVQA — Bangla Indoor Visual Question Answering **Ongoing**
B.Sc. Thesis, 4-person team | Supervisor: Dr. Md. Abdullah-Al-Jubair, AIUB

- Contributed to a natively captured, human-annotated Bangla VQA dataset of Bangladeshi homes containing 4,406 images from 68 households, 18,276 QA pairs, and 3,620 bounding boxes.
- Annotated 1,000+ images in Label Studio using the team's shared lexicon and co-authored the dataset paper, currently in preparation.

Class-Aware Data Augmentation for Long-Tailed Object Detection on BadODD **Sept 2026**
Research Project, 4-person team | Computer Vision and Deep Learning

- Analyzed severe long-tailed class imbalance in the BadODD dataset and evaluated class-aware data augmentation using a fixed YOLO11s detection pipeline.
- Developed class-aware oversampling and targeted bounding-box-safe augmentation, achieving a 2.08 percentage-point improvement in mAP50 and a 6.83 percentage-point improvement for minority classes.

Activities

Volunteer, ESAB-AIUB **Feb 2026 – Present**
Engineering Students' Association of Bangladesh, AIUB

Supported the organization and execution of student engineering events and activities.
